

## Algebraic effect examples

Example : return 0

$$\frac{\overline{\Gamma \vdash 0 : \tau} \text{ [LIT]}}{\Gamma \vdash \text{return } 0 : \tau \mid \emptyset} \text{ [RET]}$$

Replace  $\tau$  with  $\text{Int}$ :

$$\frac{\overline{\Gamma \vdash 0 : \text{Int}} \text{ [LIT]}}{\Gamma \vdash \text{return } 0 : \text{Int} \mid \emptyset} \text{ [RET]}$$

Example: val x = 1; return x;

$$\frac{\frac{\overline{\Gamma \vdash 1 : \tau_0} \text{ [LIT]}}{\Gamma \vdash \text{return } 1 : \tau_0 \mid \emptyset} \text{ [RET]} \quad \frac{\frac{x : \tau_1 \in \Gamma, x : \tau_0 \text{ [VAR]}}{\Gamma \vdash x : \tau_0 \vdash x : \tau_1} \text{ [RET]}}{\Gamma, x : \tau_0 \vdash \text{return } x : \tau_1 \mid C_1} \text{ [VAL]}}{\Gamma \vdash \text{val } x = \text{return } 1; \text{return } x : \tau_1 \mid \emptyset \cup C_1}$$

Replace  $\tau_0$  and  $\tau_1$  with  $\text{Int}$ ,  $C_1$  with  $\emptyset$

$$\frac{\frac{\overline{\Gamma \vdash 1 : \text{Int}} \text{ [LIT]}}{\Gamma \vdash \text{return } 1 : \text{Int} \mid \emptyset} \text{ [RET]} \quad \frac{\frac{x : \text{Int} \in \Gamma, x : \text{Int} \text{ [VAR]}}{\Gamma \vdash x : \text{Int} \vdash x : \text{Int}} \text{ [RET]}}{\Gamma, x : \text{Int} \vdash \text{return } x : \text{Int} \mid \emptyset} \text{ [VAL]}}{\Gamma \vdash \text{val } x = \text{return } 1; \text{return } x : \text{Int} \mid \emptyset \cup \emptyset}$$

**Example:**  $\text{def Identity} = \{(x : \text{Int}, \emptyset) \Rightarrow \text{return } x\}; \text{Identity}(1, \emptyset);$

$$\begin{array}{c}
\frac{\frac{x : \tau_1 \in \Gamma, \Gamma, x : \text{Int}, \emptyset : \sigma}{\Gamma, x : \text{Int}, \emptyset : \sigma \vdash x : \tau_1 \mid C} [\text{VAR}]}{\Gamma, x : \text{Int}, \emptyset : \sigma \vdash \text{return } x : \tau_1 \mid C \cup \vec{g_j}} [\text{RET}] \\
\frac{}{\Gamma \vdash \{(x : \text{Int}, \emptyset) \Rightarrow \text{return } x\} : \sigma \mid C} [\text{BLOCK}]
\end{array}
\quad
\frac{\frac{\text{Identity} :^C (\tau_2, \emptyset) \rightarrow \tau_0 \in \Gamma, \text{Identity} :^{C'}}{\Gamma, \text{Identity} :^C \vdash \text{Identity} : (\tau_2, \emptyset) \rightarrow \tau_0 \mid C} [\text{TRANS}]}{\Gamma, \text{Identity} :^C \sigma \vdash \text{Identity}(1, \emptyset) : \tau_0 \mid C} [\text{DEF}]$$

Replace C with  $\emptyset$  (for [Ret] to apply at leftmost proof tree),  $\tau_{0,1,2}$  with Int,  $\vec{g_j}$  with  $\emptyset$

$$\begin{array}{c}
\frac{x : \text{Int} \in \Gamma, \Gamma, x : \text{Int}, \emptyset : \emptyset}{\Gamma, x : \text{Int}, \emptyset : \emptyset \vdash x : \text{Int} \mid \emptyset} [\text{VAR}] \\
\frac{}{\Gamma \vdash \{(x : \text{Int}, \emptyset) \Rightarrow \text{return } x\} : \emptyset \mid \emptyset} [\text{BLOCK}]
\end{array}
\quad
\frac{\frac{\text{Identity} :^\emptyset (\text{Int}, \emptyset) \rightarrow \text{Int} \in \Gamma, \text{Identity} :^\emptyset}{\Gamma, \text{Identity} :^\emptyset \vdash \text{Identity} : (\text{Int}, \emptyset) \rightarrow \text{Int} \mid \emptyset} [\text{TRANS}]}{\Gamma, \text{Identity} :^\emptyset \emptyset \vdash \text{Identity}(1, \emptyset) : \text{Int} \mid \emptyset} [\text{DEF}]$$
